Summary

Software engineer with 15+ years experience in software development and leading software development teams.

Experience

2023–2025 *Lead Engineer* | UAB Madcom (Onsoftas)

- Developed all frontend and back-end systems for the company
- Handled all test coverage and system documentation
- Created a CI/CD pipeline and handled all DevOps tasks of the company
- Developed a data visualization pipeline for their BA, Marketing and Sales teams

2018–2023 *CTO* | Webueno LLC

- Developed a CRM platform for keeping track of customer data for the dev shop, keeping track of work done on clients' websites by the devs, developed a time tracking desktop app that connects into the system, automated billing and invoicing and a website monitoring system
- Oversaw the development of a WordPress plugin by another company that hooks into the platform's website monitoring system
- Interviewed, hired and managed new developers on the platform team
- Set up the CI/CD pipeline
- Conducting regular team meetings and code reviews

2020–2022 *Lead back-end engineer* | Examiz

- Took over the development company's Ruby on Rails back-end application
- Cleaned up and refactored the application code
- Assisted in designing and moving the application to the new cloud infrastructure system
- Brought the application to market serving first customers
- Handling maintenance and new feature development

2015–2018 *Senior Developer* | Paragon One

- Developed the company's Laravel/Vue platform from the original concept to a market-ready MVP
- Helped the company land a spot in Y Combinator's Winter 2017 batch
- Worked on migrating the app to AWS
- Helped build additional services on AWS Lambda with NodeJS and React
